**Subject:** Fwd: Meeting request - ITRC (Nov 28-30)

Hi. OCIR is requesting participation in a 30 minute meeting with the IRTC Executive Director who will be in town Nov 28-30. They are looking for high level participation, preferably a decision maker in the IO who can pull together the right folks. The list of their 2019 projects is shown below and includes PFAS and newly added is 1-4 Dioxane. The purpose of the meeting is to hear about their work and to input on directions for the projects. OCIR proposes doing a combined OW/OCSPP meeting and a separate OLEM meeting. Please advise as to who will attend and I will let OCIR know who to connect with for scheduling.

**Subject:** Meeting request - ITRC (Nov 28-30)

Good evening –

The ITRC Co-Chairs (Tom Higgins of MN and Richard Spiese of VT) and the ITRC Executive Director (Patty Reyes) will be in DC **Nov. 28-30** and wanted to take the opportunity to meet with federal partners about the work they're doing in 2019. I'm asked to help connect them with your principals for a short (~30 minute) discussion on ITRC issues. We're looking for a pretty high-level audience – ideally, a decisionmaker in your IO who can connect dots and pull in the relevant staff from across your programs.

ITRC has three new programs kicking off in 2019. They'd also like to gin up participation in the other three teams (see the list of teams, below).

The purpose of the meeting would be to raise EPA's awareness of the new and existing teams, and to give EPA an opportunity to weigh in on direction of the projects (and other considerations the teams should account for, given your offices' respective priorities). ITRC will NOT be asking for money, but they will emphasize that EPA's early engagement and input on their deliverables is critical to success of the guidances and trainings. The three new teams will be seeking members in December.

The 2019 teams are:

1. 1,4-Dioxane (new)
2. HABs (new)
3. An update to the 2012 Incremental Sampling Methodology guidance (new)
4. PFAS
5. Optimizing In-situ Remediation Performance & Injection Strategies
6. Implementing the use of Advanced Site Characterization Tools

(Please see the [2019 Team descriptions](#) for a brief blurb about each project, and a short background on ITRC, below)

I realize your offices may not be interested in all 6 of these topics, so we can tailor the agenda accordingly. Another option might be to combine the water/chemicals topics (1,4-Dioxane / HABs / PFAS) into one meeting, and the OLEM topics (ISM/PFAS/In-situ/ASC) into another. ORD – we could invite you to both, or do a separate briefing?

Can you help me figure out who in your offices would be the best fit for this engagement? I can get with their respective schedulers to figure out the details.

Thanks,  
Andrea Barbery, OCIR  
202-564-1397

**Background:** The Interstate Technology and Regulatory Council (ITRC) is a public-private coalition working to reduce barriers to the use of innovative air, water, waste, and remediation environmental technologies and processes. ITRC produces documents and training that broaden and deepen technical knowledge and expedite quality regulatory decision making while protecting human health and the environment. With public and private sector members from all 50 states and the District of Columbia, ITRC truly provides a national perspective.
